Serial No. 09/597,866 - 2 - Art Unit: 1631

The art unit designated for this application has changed.

Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR § 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR § 1.821 through 1.825 because of errors as listed on the attached RAW SEQUENCE LISTING ERROR REPORT. Applicants are required to submit a new computer readable form sequence listing, a new paper copy for the specification, and a new statement under 37 CFR § 1.821(f). Applicants are given the same response time regarding this failure to comply as that set forth to respond to this office action. Failure to respond to this requirement may result in abandonment of the instant application or a notice of a failure to fully respond to this Office action.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-18, drawn to apparati for enhanced detection of a biological reaction, classified in Class 422, subclass 68.1. If this Group is elected, then the below summarized specie election is also required.
- II. Claims 19-22, drawn to methods for the enhanced detection of a biological reaction wherein a biochip is activated for the detection, classified in Class 435, subclasses 6 and 7.1.

Serial No. 09/597,866 - 3 - Art Unit: 1631

If this Group is elected, then the below specie election is also required.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case the Group I biochip has an active area but is not directed to detection practice per se for said active area. Another distinct usage of an active area is the initiation of a reaction in order to produce another biological entity separate from detection per se, or, alternatively, the attraction or repulsion of charged materials in a sample to or from an active area.

SPECIE ELECTION REQUIREMENT FOR GROUPS I OR II:

This application contains claims directed to the following patentably distinct species of the claimed invention: These species are distinct in that optical detection versus electronic detection or non-optical detection are deemed separate and distinct practices requiring a separate search.

Specie A: detection via optical practice including light or UV

Serial No. 09/597,866 - 4 - Art Unit: 1631
radiation and/or optical detection, such as utilizing
fluorescence, e.g., claim 5 in Group I and claim 21 in Group
II
Specie B: Other types of detection such as utilizing electrode

Specie B: Other types of detection such as utilizing electrode based electronic detection, e.g., included in generic claims such as claim 1 and 19 of Groups I and II, respectively.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-4 and 7-18 (Group I) and claims 19 and 20 (Group II) are generic in their respective groups.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

Because these inventions are distinct for the reasons given

their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CFR § 1.6(d)). The CM1 Fax Center number is either (703)308-4242 or (703)305-3014.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ardin Marschel, Ph.D., whose telephone number is (703)308-3894. The examiner can normally be reached on Monday-Friday from 8 A.M. to 4 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward, Ph.D., can be reached on (703)308-4028.

Serial No. 09/597,866 - 6 - Art Unit: 1631 Any inquiry of a general nature or relating to the status of this application should be directed to Patent Analyst, Tina Plunkett, whose telephone number is (703)305-3524 or to the Technical Center receptionist whose telephone number is (703) 308-0196.
